multichannel

(2/22)

/ io_uring

SerNet

https://samba.org/~metze/presentations/2021/SDC/

(draft)

- What is SMB3 Multichannel?
- Updates in Samba 4.15
- What is io-uring?
- io-uring for Samba
- Performance research, prototyping and ideas
- Questions? Feedback!

Stefan Metzmacher

multichannel / io_uring

(3/22`

What is SMB3 Multichannel?

- Multiple transport connections are bound to one logical connection
 - This allows using more than one network link
 - Good for performance
 - Good for availability reasons
 - Non TCP transports like RDMA (InfiniBand, RoCE, iWarp)
- ► All transport connections (channels) share the same CliendGUID
 - This is important for Samba
- An authenticated binding is done at the user session layer
 - SessionID, TreeID and FileID values are valid on all channels
- Available network interfaces are auto-negotiated
 - FSCTL_QUERY_NETWORK_INTERFACE_INFO interface list
 - ▶ IP (v4 or v6) addresses are returned together with:
 - Interface Index (which addresses belong to the same hardware)
 - Link speed
 - RSS and RDMA capabilities

Stefan Metzmacher

multichannel / io_uring (4/22)

Last Status Updates (SDC 2020 / SambaXP 2021)

I gave a similar talk at the storage developer conference 2020:

- See https://samba.org/~metze/presentations/2020/SDC/
- It explains the milestones and design up to Samba 4.13 (in detail)
- I gave a similar talk at the SambaXP 2021:
 - See https://samba.org/~metze/presentations/2021/SambaXP/
 - It explains the milestones and updates up to Samba 4.15 (in detail)

multichannel / io_uring

5/22

SerNet

SAWBE

- Automated regression tests are in place:
 - socket_wrapper got basic fd-passing support(Bug #11899)
 - We added a lot more multichannel related regression tests
- The last missing features/bugs are fixed (Bug #14524)
 - ▶ The connection passing is fire and forget (Bug #14433)
 - Pending async operations are canceled (Bug #14449)
- 4.15 finally has "server multi channel support = yes"
 - ▶ We require support for TIOCOUTQ (Linux) or FIONWRITE (FreeBSD)
 - We disable multichannel feature if the platform doesn't support this
 - See: Retries of Lease/Oplock Break Notifications (Bug #11898)

multichannel / io_uring

6/22

SerNet

What is io-uring? (Part 1)

SAWBA

► Linux 5.1 introduced a new scalable AIO infrastructure

- It's designed to avoid syscalls as much as possible
- kernel and userspace share mmap'ed rings:
 - submission queue (SQ) ring buffer
 - completion queue (CQ) ring buffer
- ► See "Ringing in a new asynchronous I/O API" on LWN.NET
- This can be nicely integrated with our async tevent model
 - It may delegate work to kernel threads
 - It seems to perform better compared to our userspace threadpool

multichannel / io_uring

7/22

SerNet

It can also inline non-blocking operations

io-uring for Samba (Part 1)

- Between userspace and filesystem (available from 5.1):
 - ► IORING_OP_READV, IORING_OP_WRITEV and IORING_OP_FSYNC
 - Supports buffered and direct io
- Between userspace and socket (and also filesystem) (from 5.8)
 - IORING_OP_SENDMSG, IORING_OP_RECVMSG
 - Improved MSG_WAITALL support (5.12, backport to 5.11, 5.10)
 - IORING_OP_SPLICE, IORING_OP_TEE
 - Maybe using IORING_SETUP_SQPOLL or IOSQE_ASYNC
- Path based syscalls with async impersonation (from 5.6)
 - ► IORING_OP_OPENAT2, IORING_OP_STATX
 - Using IORING_REGISTER_PERSONALITY for impersonation
 - IORING_OP_UNLINKAT, IORING_OP_RENAMEAT (from 5.10)

multichannel / io_uring

8/22

SerNet

IORING_OP_MKDIRAT, IORING_OP_SYMLINKAT, IORING_OP_LINKAT (from 5.15)

IORING_FEAT_NATIVE_WORKERS (from 5.12)

- ► In the kernel...
 - The io-uring kernel threads are clone()'ed from the userspace thread
 - They just appear to be blocked in a syscall and never return
 - This makes the accounting in the kernel much saner
 - Allows a lot of restrictions to be relaxed in the kernel
- For admins and userspace developers...
 - They are no longer 'io_wqe_work' kernel threads
 - 'top' shows them as part of the userspace process ('H' shows them)
 - They are now visible in containers
 - 'pstree -a -t -p' is very useful to see them
 - ► They are shown as iou-wrk-1234, for a task with pid/tid 1234

Stefan Metzmacher

multichannel / io_uring (9/22)

vfs_io_uring in Samba 4.12 (2020)

With Samba 4.12 we added "io_uring" vfs module

- For now it only implements SMB_VFS_PREAD,PWRITE,FSYNC_SEND/RECV
- It has less overhead than our pthreadpool default implementations
- I was able to speed up a smbclient 'get largefile /dev/null'
 - Using against smbd on loopback
 - The speed changes from 2.2GBytes/s to 2.7GBytes/s
- The improvement only happens by avoiding context switches
 - But the data copying still happens:
 - From/to a userspace buffer to/from the filesystem/page cache
 - > The data path between userspace and socket is completely unchanged

multichannel / io_uring

(10/22)

SerNet

For both cases the cpu is mostly busy with memcpy

Performance research (SMB2 Read)

▶ In October 2020 I was able to do some performance research

- With 100GBit/s interfaces and two NUMA nodes per server.
- ► At that time I focussed on the SMB2 Read performance only
 - We had limited time on the given hardware
 - We mainly tested with fio.exe on a Windows client
 - Linux kernel 5.8.12 on the server
- More verbose details can be found here:
 - https://lists.samba.org/archive/samba-technical/2020-October/135856.html

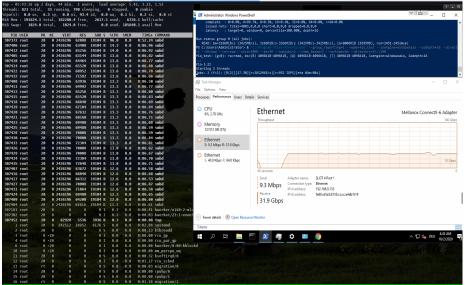

Stefan Metzmacher

multichannel / io_uring

11/22

Performance with MultiChannel, sendmsg()

4 connections, ~3.8 GBytes/s, bound by >500% cpu in total, sendmsg() takes up to 0.5 msecs

multichannel / io_uring

(12/2Ź)

SerNet

SD@ SAMBA

IORING_OP_SENDMSG (Part1)

4 connections, ~6.8 GBytes/s, smbd only uses ~11% cpu, (io_wqe_work ~50% cpu) per connection, we still use >300% cpu in total

More loopback testing on brand new hardware

- Recently I re-did the loopback read tests IORING_OP_SENDMSG/SPLICE (from /dev/shm/)
 - 1 connection, ~10-13 GBytes/s, smbd 7% cpu, with 4 iou-wrk threads at 7%-50% cpu.
 - 4 connections, 24-30 GBytes/s, smbd 18% cpu, with 16 iou-wrk threads at 3%-35% cpu.
- I also implemented SMB2 writes with IORING_OP_RECVMSG/SPLICE (tested to /dev/null)
 - 1 connection, ~7-8 GBytes/s, smbd 5% cpu, with 3 io-wrk threads at 1%-20% cpu.
 - ► 4 connections, ~10 GBytes/s, smbd 15% cpu, with 12 io-wrk threads at 1%-20% cpu.
- ▶ I tested with a Linux Kernel 5.13

samea

- In both cases the bottleneck is clearly on the smbclient side
- We could apply similar changes to smbclient and add true multichannel support
- It seems that the filesystem->pipe->socket path is much better optimized

multichannel / io_uring (19/22)

Improvements for transfers with SMB3 signing

- Samba 4.15 has support for AES-128-GMAC signing:
 - This is also available in recent Windows versions
 - It's based on AES-128-GCM (but only with authentication data)
 - The gnutls library is able to provide:
 - ▶ ~6 GBytes/s for AES-128-GCM
 - ~10 GBytes/s for AES-128-GMAC
- ► For SMB3 signing/encryption we use:
 - IORING_OP_SPLICE from a file into a (splice)pipe
 - IORING_OP_TEE from the (splice)pipe to a 2nd (tee)pipe
 - IORING_OP_READ from the (tee)pipe into a userspace buffer
 - (vmsplice might might work even better)
 - The userspace buffer is only used to calculate the signing signature
 - IORING_OP_SENDMSG and IORING_OP_SPLICE are used in order to avoid a copy back to the kernel
- ► For a SMB2 read test I removed the signing check in smbclient:
 - The performance changed from ~3 GBytes/s before
 - To ~5 GBytes/s using the IORING_OP_TEE trick
 - \blacktriangleright With smbclient still being the bootleneck at 100% cpu

SAMAA

multichannel / io_uring (20/22)

Future Improvements

SAMBA

- recvmsg and splice deliver partial SMB packets to userspace
 - \blacktriangleright I tested with AF_KCM ($_{Kernel\ Connection\ Multiplexor})$ and an eBPF helper
 - But MSG_WAITALL is the much simpler and faster solution
 - I also prototyped a SPLICE_F_WAITALL
 - eBPF support in io-uring would also be great for optimizations
- It also seems that socket->pipe->filesystem:
 - Does not implement zero copy for all cases
 - Maybe it's possible to optimize this in future
- ▶ In the end SMB-Direct will also be able to reduce overhead
 - My smbdirect driver is still work in progress...
 - With the IORING_FEAT_NATIVE_WORKERS feature it will be possible glue it to IORING_OP_SENDMSG

multichannel / io_uring
